Q.No.	Topic	Answer	Answer	
			Answer	Answer
1	What is a gene?	A gene is a unit of heredity that is transferred from a parent to offspring and is held to be the basic physical and functional unit of heredity.		
2	What is a chromosome?	A chromosome is a long DNA molecule with part of the genome. It is a single molecule of DNA that carries the genetic information for an organism.		
3	What is a DNA molecule?	A DNA molecule is a double helix structure made of two sugar-phosphate backbones joined by nitrogenous base pairs.		
4	What is a protein?	A protein is a large molecule made of amino acids. It is a chain of amino acids that are linked together by peptide bonds.		
5	What is a mutation?	A mutation is a change in the DNA sequence. It can be a small change in a single base pair or a large change in a whole chromosome.		
6	What is a gene pool?	A gene pool is the collection of all the genes in a population. It is the total genetic information available to a population.		
7	What is a population?	A population is a group of individuals of the same species that live in the same area and can interbreed.		
8	What is a species?	A species is a group of individuals that can interbreed and produce fertile offspring. It is a group of organisms that share common characteristics.		
9	What is a community?	A community is a group of different species that live in the same area and interact with each other. It is a group of organisms that live together and interact with each other.		
10	What is an ecosystem?	An ecosystem is a community of organisms and their physical environment. It is a system of interacting organisms and their physical environment.		
11	What is a habitat?	A habitat is the natural environment of an organism. It is the place where an organism lives and grows.		
12	What is a niche?	A niche is the role of an organism in its environment. It is the position an organism occupies in its environment.		
13	What is a population?	A population is a group of individuals of the same species that live in the same area and can interbreed.		
14	What is a species?	A species is a group of individuals that can interbreed and produce fertile offspring. It is a group of organisms that share common characteristics.		
15	What is a community?	A community is a group of different species that live in the same area and interact with each other. It is a group of organisms that live together and interact with each other.		
16	What is an ecosystem?	An ecosystem is a community of organisms and their physical environment. It is a system of interacting organisms and their physical environment.		
17	What is a habitat?	A habitat is the natural environment of an organism. It is the place where an organism lives and grows.		
18	What is a niche?	A niche is the role of an organism in its environment. It is the position an organism occupies in its environment.
