STTP on “DATA ENGINEERING”

The Department of Informatics organized a five-day training programme titled “Data Engineering” from January 20-24, 2025 as an event of VISTA (Visionaries on Informatics in Science, Technology, and Analytics), the association of the Department of Informatics, aimed at equipping students with essential skills in data transformation, data analytics and visualization using Python. The training fostered practical knowledge and enhanced problem-solving abilities in real-world data science scenarios. The inaugural session featured a motivational address by the Vice-Chancellor, Prof. Dr. V. Ramachandran, who emphasized the relevance of Python in current technological trends and appreciated the expertise of the resource person.

Dr. Rengaraju Baydeti, Assistant Professor, Department of Computer Science and Engineering, NIT, Nagaland conducted all five days of training with an engaging approach that combined theoretical concepts with practical exercises. The training sessions were designed to equip students with essential skills in Python programming, data analytics and data visualization. The sessions were interactive, combining theory and practice, enabling participants to gain an experience with Python tools and techniques for data science applications.

This initiative aligns with the United Nations Sustainable Development Goals (SDGs), particularly SDG 4: Quality Education and SDG 8: Decent Work and Economic Growth, by fostering skill development and enhancing employability. The programme was co-ordinated by Dr. A. Muthamizh Selvan, Head and Associate Professor and co-coordinated by Dr. V. Rajkumar, Assistant Professor (SG), with Dr. M Manikandan, Assistant Professor, and all faculty and staff from the Department of Informatics.

Objectives

1. To introduce students to Python programming and its applications in data science.
2. To provide practical exposure to data analytics and data visualization techniques.
3. To enhance skills in preparing datasets, building models, evaluating machine learning performance and produce data visualization.
4. To prepare students for academic projects, internships, and future careers in data science.

Activities Conducted

1. Lectures and training by Dr. Nagaraju Baydeit on data science fundamentals.
2. Practical exercises on data engineering task using Python.
3. Sessions on data handling the missing values, data cleaning and data transformation with Python.
4. Building and evaluating the CSV file handling using Python libraries.
5. Dataset preparation and transformation to perform Regression models in classification.
6. Exercises on data visualization techniques and performance evaluation of machine learning algorithms.
7. Prepare different type of plots visualization by using Python libraries.

Outcomes

1. Students gained a comprehensive understanding of Python for data analytics and machine learning.
2. Acquired practical knowledge of building and evaluating data handling process.
3. Improved skills in dataset preparation, transformation, and visualization for data science applications.
4. Enhanced ability to optimize code for efficient programming using Python techniques.
5. Developed readiness for academic projects, internships, and employment in data science and analytics.
6. Strengthened problem-solving and critical thinking capabilities through training.
7. Contributed to achieving SDG 4: Quality Education by offering accessible, high-quality training, and SDG 8: Decent Work and Economic Growth by equipping students with skills for the digital economy.
