

Criterion 1 – Curricular Aspects

Key Indicator	1.1	Curriculum Design and Development
Metric	1.1.3	Average percentage of courses having focus on employability/ entrepreneurship/ skill Development offered by the Department of Aerospace Engineering.

DEPARTMENT OF AEROSPACE ENGINEERING

SYLLABUS COPY OF THE COURSES HIGHLIGHTING THE FOCUS ON EMPLOYABILITY/ ENTREPRENEURSHIP/ SKILL DEVELOPMENT

1. List of courses for the programmes in order of

S. No.	Programme Name
1.	Bachelor of Technology (Aerospace Engineering) (Full Time)

2. Syllabus of the courses as per the list.

Legend :	Words highlighted with Blue Color	-	Entrepreneurship
	Words highlighted with Red Color	-	Employability
	Words highlighted with Green Color	-	Skill Development

1. LIST OF COURSES

Name of the Course	Course Code	Year of Introduction	Activities/Content with direct bearing on Employability/ Entrepreneurship/ Skill development
Calculus and Linear Algebra	XMA101	2018-19	Skill Development- Test, Quiz, Problem solving
Electrical and Electronic Engineering Systems	XBE102	2015-16	Skill development, Employability- Assignment, Class Test, Seminar
Applied Physics for Engineers	XAP103	2018-19	Skill development, Employability- Test, Assignment, Seminar
Engineering Graphics and Design	XEG104	2018-19	Employability, Skill development- Problem solving, Assignment, Seminar
Speech Communication	XGS105	2021-22	Skill develoment- Group Discussion, Oral Presentation, Quiz
Constitution of India	XUM106	2018-19	Skill Develoment- Test, Quiz, Assignment
Electrical and Electronic Engineering Systems Lab	XBE107	2015-16	Skill development, Employability- Record Writing, Observation, Mini project
Applied Physics for Engineers Lab	XAP108	2018-19	Employability- Record Writing, Observation, Mini project
Calculus, Ordinary Differential Equations and Complex Variable	XMA201	2018-19	Skill development- Test, Quiz, Tutorial
Programming for Problem Solving	XCP202	2018-19	Skill development, Employability- Assignment, Class Test, Seminar
Applied Chemistry for Engineers	XAC203	2018-19	Skill development, Employability, Entrepreneurship- Problem solving, Assignment, Quiz, Test
Technical Communication	XGS204	2021-22	Skill development- Group discussion, Presentation, Assignment
Workshop Practices	XWP205	2018-19	Skill development- Record Writing, Observation, Mini project
Engineering Mechanics	XEM206	2015-16	Employability, Skill Development- Assignment, Attendance, Seminar, Case study
Programming for Problem Solving Lab	XCP207	2018-19	Skill development, Employability- Record Writing, Observation, Mini project
Applied Chemistry for Engineers Lab	XAC208	2018-19	Employability- Record Writing, Observation, Mini project

Transforms and Partial Differential Equations	XMA301	2018-19	Skill Development- Assignment, Quiz, Test, Applications
Introduction to Aerospace Engineering	XAS302	2022-23	Employability, Skill Development- Assignment, Seminar, Case study
Strength of Materials	XAS303	2022-23	Employability, Skill Development- Assignment-I,II, Seminar, Case study, Quiz
Fluid Mechanics	XAS304	2022-23	Employability, Skill Development - Assignment- I & II, Seminar, Class work
Aero Engineering Thermodynamics	XAS305	2015-16	Employability, Skill Development- Assignment, Seminar, Slip Test
Entrepreneurship Development	XUM306	2022-23	Employability, Skill Development, Entrepreneurship- Business Plan, Case Study, Assignment, Slip Test
Universal Human Values 2: Understanding Harmony	HSMC (H- 102)	2022-23	Skill Development- Group Discussion, Test, Assignment, Seminar, Quiz
Strength of Materials Lab	XAS308	2022-23	Skill development, Employability- Record Writing, Observation, Mini project
Fluid Mechanics Lab	XAS309	2022-23	Skill development, Employability- Record Writing, Observation, Mini project
In-Plant Training-I	XAS310	2015-16	Employability, Skill Development- Work Diary, Report, Presentation, Attendance, Feedback from industry
Probability and Statistics	XPS401	2022-23	Skill Development- Assignment, Test, Quiz
Aerodynamics- I	XAS402	2015-16	Employability, Skill Development- Assignment,Seminar, Slip test, Attendance
Aircraft Structures- I	XUM403	2015-16	Skill Development, Employability - Assignment-1,2, Class work note, Attendance
Air-Breathing Propulsion	XAS404	2015-16	Skill Development, Employability- Assignment, Seminar, Case Study, Attendance
Economics for Engineers	XUM405	2015-16	Skill Development- Assignment, Seminar, Attendance
Disaster Management	XUM406	2015-16	Skill Development- Assignment I & II, Class Test, Seminar, Case Study
Aerodynamics Lab	XAS407	2015-16	Skill development, Employability- Record Writing, Observation, Mini

			project
Thermal and Propulsion Lab	XAS408	2015-16	Skill development, Employability- Record Writing, Observation, Mini project
CAD Lab	XAS409	2022-23	Skill development, Employability- Record Writing, Observation, Mini project
Aerodynamics-II	XAS501	2018-19	Skill Development, Employability- Assignment, Case Study, Seminar, Slip Test
Aircraft Structures- II	XAS502	2018-19	Employability, Skill Development- Assignment, Seminar, Case study, Attendance
Aerospace Propulsion	XAS503	2018-19	Employability, Skill Development- Assignment, Seminar, Slip test
Elements of Satellite Technology	XAS504	2015-16	Employability, Skill Development- Assignment, Seminar, Case study, Attendance
Navigation Systems	XAS505C	2015-16	Skill Development, Employability- Assignment, Test, Seminar, Case study
Open Elective Course – I	X**OE*	2015-16	****
Aircraft Structures Lab	XAS507	2018-19	Skill development, Employability- Record Writing, Observation, Mini project
Aircraft Design Project	XAS508	2023-24	Skill development, Employability- Record Writing, Observation, PPT, Mini project
In-Plant Training – II	XAS509	2015-16	Employability, Skill Development- Work Diary, Report, Presentation, Attendance, Feedback from industry
Finite Element Analysis	XAS601	2015-16	Employability, Skill Development- Assignment I & II, Seminar, Class work
Flight Dynamics	XAS602	2018-19	Employability, Skill Development- Assignment, Seminar, Poster Presentation, Slip Test
Space Mechanics	XAS603C	2018-19	Employability, Skill Development - Assignment, Online quiz, Seminar, Attendance
Open Elective Course – II	X**OE*	2015-16	****
Professional Skills	XGS605	2023-24	Employability, Skill Development- Assignment, Seminar, Quiz, Slip

			Test
Cyber Security	XUM606	2015-16	Skill Development- Assignment, Quiz, Seminar
Machine Dynamics Lab	XAS607	2023-24	Skill development, Employability- Record Writing, Observation, Mini project
Aeromodelling Lab	XAS608	2018-19	Skill development, Employability- Record Writing, Observation, Mini project
Computational Fluid Dynamics	XAS701	2015-16	Employability, Skill Development- Assignment, Seminar, Case study, Slip test, Record Writing, Observation, Mini project
Aircraft Engine Maintenance	XASE17	2015-16	Employability, Skill Development- Assignment, Seminar, Case study
Rockets and Missiles	XASE21	2015-16	Employability, Skill Development- Assignment, Seminar, Case study
Open Elective-III	X**OE*	2015-16	****
Project Phase-I	XAS705	2015-16	Employability, Skill Development, Entrepreneurship- Review, PPT Presentation, Fabrication, Report submission
Cyber Security	XUM706	2015-16	Skill Development, Entrepreneurship- Assignment, Seminar, Test
In-Plant Training-III	XAS707	2015-16	Skill Development -Work Diary, Report, Presentation, Attendance, Feedback from industry
Aero and Space Modeling	XASM03	2018-19	****
Cryogenics	XASE28	2015-16	Employability, Skill Development- Assignment, Seminar, Casestudy-
Open Elective-IV	X**OE*	2015-16	****
Open Elective-V	X**OE*	2015-16	****
Project Phase- II	XAS804	2015-16	Employability, Skill Development, Entrepreneurship- Review, PPT Presentation, Fabrication, Report submission
Elements of UAV	XASH01	2022-23	Employability- Assignment, Seminar, Q&A
UAV Design, Control, & Meteorology	XASH02	2022-23	Employability- Assignment, Seminar, Q&A

UAV Business and Operational Industrial Aspects	XASH03	2023-24	Employability- Assignment, Seminar, Group Discussion, Q&A
Design and Development of UAV	XASH04	2023-24	Employability- Record Writing, Observation, Mini project, Field Training
Remote Pilot Training	XASH05	2023-24	Employability- Record Writing, Observation, Mini project, Field Training
Project Work	XASH06	2023-24	Employability, Skill Development, Entrepreneurship- Review, PPT Presentation, Fabrication, Report submission

SYLLABUS

COUR	RSE CODE	XMA101		L	Τ	Р	С	
COUR	RSE NAME	CALCULUS AND LINEAR ALGEB	BRA	3	1	0	4	
	EQUISITES	NIL		L	Τ	Р	Н	
	= 3:0.5:0.5		3	1	0	4		
COURSE OBJECTIVES								
• Un	derstand the ap	plication of calculus and linear algebra in	n engineering	z .				
COUR	RSE OUTCOM	ES	DOMAIN		LEV	EL		
CO1	<i>Apply</i> orthogo form to canonic	nal transformation to reduce quadratic ical forms.	Cognitive	e		memt Apply	bering ing	
CO2		series to tests the convergence of the l series. Half range Fourier sine and	Cognitive			Applying Remembering Guided Response		
CO3		<i>t</i> the derivative of composite functions and Cognitive icit functions. Euler's theorem and Jacobian. Psychomotor				Remembering Guided Response		
CO4	<i>Explain</i> the functions of two variables by Taylor's expansion, by finding maxima and minima with and				Remembering Understanding Receiving		inding	
CO5	Curvature and	ntial and Integral calculus to notions of to improper integrals.	Cognitive A _I				pplying	
	UNIT I MATRICES 12L+3'							
		n - Eigen values and Eigen vectors -Pr						
vectors - Cayley-Hamilton Theorem - Diagonalisation of Matrices - Real Matrices: Symmetric -								
Skew-Symmetric and Orthogonal Quadratic form – canonical form - Nature of Quadratic form and								
		adratic form to Canonical form (Orthogo	onal only).					
UNIT	II SEQUE	NCES AND SERIES]	2L+3T	

Sequences:	Definiti	on and examples-Serie	es: Types and convergence	e- Series of positi	ve terms –				
	Tests of convergence: comparison test, Integral test and D'Alembert's ratio test-Fourier series:								
	•	cosine series- Parseval	6						
UNIT III			ULUS: PARTIAL DIFFI	ERENTIATION	12L+3T				
Limits and	continu	ity –Partial differenti	ation - Total Derivative	- Partial differe	ntiation of				
Composite 1	Function	ns: Change of Variabl	es – Differentiation of an	Implicit Function	n - Euler's				
Theorem- Ja	cobian.								
UNIT IV	INIT IVMULTIVARIABLE CALCULUS: MAXIMA AND MINIMA AND12L+3T								
	VECT	FOR CALCULUS							
Taylor's the	orem fo	or function of Two var	iables- Maxima, Minima o	of functions of two	variables:				
with and w	ithout c	constraints - Lagrange	's Method of Undetermin	ed Multipliers -	Directional				
Derivatives	- Gradie	ent, Divergence and Cu	rl.						
UNIT V	DIFF	ERENTIAL AND INT	FEGRAL CALCULUS		12L+3T				
Evolutes and	d involu	tes; Evaluation of defin	nite and improper integrals	s; Beta and Gamm	a functions				
and their pr	operties	; Applications of defin	nite integrals to evaluate s	surface areas and v	volumes of				
revolutions.

LIST OF EXPERIMENTS

Ex.	Experiments	COs						
No								
1.	Torsional Pendulum - determination of moment of inertia and rigidity							
	modulus of the given material of the wire.							
2.	Uniform Bending - Determination of the Young's Modulus of the material of							
	the beam.							
3.	Non-Uniform Bending - Determination of the Young's Modulus of the							
	material of the beam.							
4.	Meter Bridge - Determination of specific resistance of the material of the wire.							
5.	Spectrometer - Determination of dispersive power of the give prism.							
6.	Spectrometer - Determination of wavelength of various colours in Hg source							
	using grating.							
7.	Air wedge - Determination of thickness of a given thin wire.							
8.	Laser - Determination of wavelength of given laser source and size of the							
	given micro particle using Laser grating.							
9.	Post office Box - Determination of band gap of a given semiconductor.							
10.	PN Junction Diode - Determination of V-I characteristics of the given diode.

UNIT	I PERIOI	DIC PROPERTIES AND WATER CH	IEMISTRY				8L+3T				

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries. Water Chemistry-Water quality parameters-Definition and explanation of hardness, determination of hardness by EDTA method-Introduction to alkalinity.

UNIT IIUSE OF FREE ENERGY IN CHEMICAL EQUILIBRIA12L+3TThermodynamic functions: energy, entropy and free energy. Estimations of entropy and free
energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base,
oxidation reduction and solubility equilibria. Corrosion-Types, factors affecting corrosion rate and
Control methods. Use of free energy considerations in metallurgy through Ellingham diagrams.
Advantages of electroless plating, electroless plating of nickel and copper on Printed Circuit Board
(PCB).

UNIT III ATOMIC AND MOLECULAR STRUCTURE

10L+3T

Schrodinger equation. Particle in a box solution and their applications for conjugated molecules and nanoparticles.. Molecular orbitals of diatomic molecules and plots of the multicenter orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.

Intermolecular forces and potential energy surfaces

Ionic, dipolar and Vander waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H_3 , H_2F and HCN and trajectories on these surfaces.

UNIT IVSPECTROSCOPIC TECHNIQUES AND APPLICATIONS7L+3TPrinciplesofspectroscopyandselectionrules.Electronicspectroscopy-chromophore,auxochromes, typesofelectronictransitionandapplication.Fluorescenceanditsapplicationsinmedicine.Vibrationalspectroscopy-typesofvibrations,Instrumentationandapplications.Rotationalspectroscopy ofdiatomicmolecules.Nuclearmagneticresonancespectroscopy-conceptofchemicalshiftandapplications-magneticresonanceimaging.Diffractionandscattering.

UNIT V STEREOCHEMISTRY AND ORGANIC REACTIONS 8L+3T

Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds

Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization reactions and ring opening reactions. Synthesis of a commonly used drug molecule-Aspirin and paracetamol.

COURSE OBJECTIVES								

Upon successful completion of the course, student will have:

- Ability to apply mathematics, science, and engineering.
- Ability to design and conduct experiments, as well as to analyze and interpretdata.
- Ability to identify, formulate, and solve engineeringproblems.
- Ability to apply modern engineering tools, techniques and resources to solve complex mechanical engineering activities with an understanding of thelimitations.
- Ability to comprehend the thermodynamics and their corresponding processes that influence the behavior and response of structural components.
- Ability to apply principles of engineering, basic science, and mathematics (including multivariate calculus and differential equations) and thermodynamics to model, analyze, design, and realize physical systems, components, orprocesses.

COUR	SE OUTCOMES	DOMAIN	LEVEL				
CO1	<i>Explain</i> the principles forces, laws and theirapplications.	Cognitive	Understanding, Apply				
CO2	<i>Classification</i> of friction, and <i>apply</i> the forces in Trusses and beams.	Cognitive	Understanding, Apply				
CO3	<i>Explain</i> and <i>Apply</i> moment of Inertia and Virtual work	Cognitive	Understanding, Apply				
CO4	Outline and Examine Dynamics	Cognitive	Understanding, Apply				
CO5	<i>Explain</i> free and forced vibration	Cognitive	Remember, Understanding				
UNIT			9L+3T				
	Systems Basic concepts, Particle equilibrium in 2-I	-					
•	of Forces, Coplanar Concurrent Forces, Componen	-					
	and its Application; Couples and Resultant of Force	• •	•				
	Free body diagrams, Equations of Equilibrium of Co	planar Systems	s and Spatial Systems;				
	ndeterminacy.						
UNIT			9L+3T				
	of friction, Limiting friction, Laws of Friction, Stati	· · · · · · · · · · · · · · · · · · ·					
	Bodies, wedge friction, screw jack & differential screw jack; Equilibrium in three dimensions;						
	d of Sections; Method of Joints; How to determi						
-	ession; Simple Trusses; Zero force members; Bear	ns & types o	of beams; Frames &				
Machin							
UNIT	III CENTROID, CENTRE OF GRAVITY AND	VIRTUAL W	/ORK 9L+3T				

AND ENERGY METHOD

Centroid of simple figures from first principle, centroid of composite sections; Centre of Gravity and its implications; Area moment of inertia- Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.

Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium.

UNIT IVREVIEW OF PARTICLE DYNAMICS AND INTRODUCTION TO
KINETICS OF RIGID BODIES9L+3T

Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton's 2nd law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse-momentum (linear, angular); Impact (Direct and oblique). Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid bodyrotation.

UNIT VMECHANICAL VIBRATIONS9L+3TBasic terminology, free and forced vibrations, resonance and its effects; Degree of freedom;
Derivation for frequency and amplitude of free vibrations without damping and single degree of
freedom system, simple problems, types of pendulum, use of simple, compound and torsion
pendulums.

COURSE OBJECTIV	ES				

• To introduce and explain fundamentals of Fluid Mechanics, which is used in the applications of Aerodynamics.

ricioayn							
COURSE (DUTCOMES	DOMAIN	LEVEL				
CO1 I	Describe fluid properties.	Cognitive	Remember				
CO2 I	<i>Express</i> the ideas of fluid statics and kinematics.	Cognitive	Understand				
CO3 1	Explain about the fluid dynamics.	Cognitive	Understand				
CO4 1	Explain about boundary layer.	Cognitive	Understand				
CO5 A	Analyze flow through pipes.	Cognitive	Analyze				
	<i>Compare and describe</i> the performance of centrifugal and reciprocating pump.	Cognitive	Evaluate, Remember				
UNIT I	DEFINITIONS AND FLUID PROPERTIES		9+3				
Introduction	to fluid - distinction between solid and fluid - basic de	efinition - class	ification of fluids				
- dimensions and units - system of units - fluid properties - continuum concept of system and control volume.							
UNIT IIFLUID STATICS AND KINEMATICS9+3							

Pascal	Pascal's law - centre of pressure - forces on curved surfaces - buoyance and floatation - pressure								
measu	measurement by manometers - fluid kinematics - flow visualization - lines of flow - types of fluid								
flow -	flow - flow net - velocity measurements.								
UNIT	III	FLUID D	DYNAMICS			9+3			
Euler's equation - Bernoulli's equation - venturimeter - orifice meter - pitot tubes - Coefficient of									
discha	urge - 1	nouth piec	e - Hagen poiseulli's equ	ation - Darcy's equa	tion for loss of head	due to			
frictio	n in pi	pe.							
UNIT	' IV	BOUNDA	ARY LAYER AND FLO	W THROUGH PIP	ES	9+3			
Lamin	nar bou	ndary laye	er - turbulent boundary lay	ver - boundary layer	separation - developr	nent of			
lamina	ar and	turbulent fl	lows in circular pipes - hyd	lraulic grade line - lo	sses in pipes - pipes i	n series			
and pa	arallel -	equivalen	t pipes - pipes in network -	- power transmission	through pipes.				
UNIT V HYDRAULIC MACHINES									
Centr	ifugal _l	oumps - co	mponents - heads and effic	ciencies of centrifuga	l pump - reciprocating	g pump			
- sing	le actir	ig - double	acting - slip - discharge an	nd power requiremen	t - delivery - perform	ance of			
pump	s - non	convention	nal pumping system – Intro	oduction to water turl	bines.

COURSE OBJECTIVES						
• To give a brief background of application of various laws of thermodyna		and	its			
application in heat transfer, refrigeration and air-conditioning, jet propulsion systemeters						
COURSE OUTCOMES DOMAIN	LE	VEI	_			
CO1 <i>Describe</i> the laws of thermodynamics and their application to a wide range of systems. Cognitive	Ren	emb	er			
Analyze the work and heat interactions associated with a						
prescribed process path and to perform thermodynamic						
CO2 analysis of a flow system. An ability to evaluate entropy Cognitive	An	alyze	a			
changes and familiarity with calculations of the efficiencies of	1 11	ur y 20	2			
heat engines and other related engineering devices.						
Assess the efficiency and mean effective pressure of different						
thermodynamic air standard cycles.	Eva	aluat	e			
Describe the pure substance (an ideal gas) and its applications	e Remember					
CO4 in various flow and non flow process, and ability to evaluate Cognitive			er			
the efficiencies.						
CO5 Describe the construction and working principle of different Cognitive	Remember					
types of compressors.						
Cognitive	Eva	aluat	e			
CO6 systems and able to calculate the COP /cooling load for various applications.						
UNIT I BASIC THERMODYNAMICS		0)+3			
Systems, Zeroth, First and Second laws - concept of entropy change in non-flow pro	cesses					
equations [steady flow energy equation] – Heat engines – Refrigerators and heat p						
thermodynamic relations.	r - r					
UNIT II AIR STANDARD CYCLES AND IC ENGINES		9)+3			
Otto, Diesel, Dual and Brayton cycles - Air standard efficiency -Mean effective p	pressur	e –T	wo			
and four stroke IC Engines – P-V & T-S diagrams.						
UNIT III GAS TURBINES)+3			
Introduction to aero-engine cycles: ramjets, turbojets, turbofans and turboprop	ps/turb	osha	fts,			
Velocity diagram - Application of gas turbines in aviation.						
UNIT IV AIR COMPRESSORS	<u> </u>)+3			
Positive displacement compressors – Construction and working principle of centrif (mixed flow) and axial compressors.	ugal, c	nago	nai			
UNIT V REFRIGERATION AND AIR CONDITIONING)+3			
Principles of refrigeration, Air conditioning - Heat pumps - Vapour compression	ion –					
absorption types - Coefficient of performance, Properties of refrigerants - Ba		-				
difference between refrigeration and air conditioning – Various methods of producin						
effects (RE).	2 -7		0

LEARNING OBJECTIVES

- Appreciate the importance of probability and statistics in computing and research.
- Develop skills in presenting quantitative data using appropriate diagrams, tabulations and summaries and to use appropriate statistical method in the analysis of simple datasets.
- Interpret and clearly present output from statistical analyses in a clear concise and understandable manner.
- The main objective of this course is to provide students with the foundations of probabilities and statistical analysis mostly used in varied applications in engineering and science like disease modeling, climate prediction and computer networks etc.

	RSE OUTCOMES		
-		DOMAIN	LEVEL
CO1	Explain conditional probability, independent events;	Cognitive	Understanding
	find expected values and Moments of Discrete		Remembering
	random variables with properties.		
CO2	Find distribution function, Marginal density function,	Cognitive	Remembering
	conditional density function, <i>Define</i> density function		
	of conditional distribution functions normal,		
	exponential and gamma distributions.		
CO3	Find measures of central tendency, statistical	Cognitive	Remembering
	parameters of Binomial, Poisson and Normal,		
	correlation, regression. Rank Correlation coefficient		Guided Response
	of two variables.	Psychomotor	

CO4	difference of proportion, single mean, difference of means and difference of standard deviations with simple problems.

COURSE OBJECTIVES

• To study the behaviour of various aircraft structural components under different types of loads.

COUR	RSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Recall</i> engineering mechanics and <i>explain</i> stresses and wing structures.	Cognitive	Remember, Understand

CO2	Draw as structure	nd <i>explain</i> statically determinate and indeterminate es.	Cognitive	Remember, Understand							
CO3		and <i>analyze</i> the behavior of elastic structures d to combined loads, including bending, torsion and ids.	Cognitive	Understand , Analyze							
CO4	find ou	and <i>Use</i> Euler's formula for various columns to t critical load. <i>Distinguish</i> Euler's formula and 's formula.	Cognitive	Understand , Apply							
CO5	Explain	the real time application of columns.	Cognitive	Understand							
CO6	<i>List</i> the theories of failure and <i>explain</i> themand then <i>utilize</i>										
UNIT	Ι	BASICS OF STRESSES AND STRAIN		8							
Classif	rication o	f loads and beams- Stress, Strain and types- Three	-dimensional	Hook's Law-							
Princip	al stresse	s- Mohr's Circle.									
UNIT	II	STATICALLY DETERMINATE AND INDE	TERMINAT	E 10+4							
		STRUCTURES									
Analys	is of pla	ne truss using method of joints - Propped Cantil	ever- Fixed-Fi	xed beams -							
	_	ee Moment Equation.									
UNIT	III	ENERGY METHODS		8+3							
Strain	Energy of	lue to axial, bending and Torsional loads - Castigli	ano's theorem	ns- Maxwell's							
Recipr	ocal theor	em - Unit load method.									
Recipio

COURSE OBJECTIVES

• Understand the working principle of SI and CI engine

• Analyze the thermal efficiency of diesel engine with different load conditions

- Understand the concept of heat transfer in a flat plate
- Study the functions of Aircraft Piston and Jet engines components

COURSE C	DUTCOMES	DOMAIN	LEVEL	
CO1	<i>Sketch</i> the valve and Port timing diagram of SI engine & CI engine	Psychomotor	Mechanism	
CO2	<i>Detects</i> the flash point and fire point of various fuels	Psychomotor	Perception	

	Measures the IHP,BHP and Brake thermal	Psychomotor	Guided	
CO3	efficiency of 4-stroke diesel engine		Response	
	Describes the working principle of piston and jet	Psychomotor	Democratica	
CO4	engine components		Perception	
	Detects the different node temperatures of			
CO5	Aluminum flat plate using free and forced	Psychomotor	Perception	
	convection apparatus			
CO6	Measures the pressure and velocity of the jet in	Psychomotor	Guided	
	different axis		Response	
	EXPERIMENTS			
Ex. No	Experiments		COs	
1.	Valve Timing Diagram for single cylinder four stroke D	v	CO1	
2.	Port Timing Diagram for single cylinder two stroke Petr	· · · · · · · · · · · · · · · · · · ·	CO1	
3.	Determination of Flash point and Fire point (Open cup)		CO2	
4.	Determination of Flash point and Fire point (Closed cup)	CO2	
5.	Retardation test to find frictional power of a single cylin	nder Diesel engine.		
6.	Study of an aircraft piston engine		CO4	
7.	Study of an aircraft jet engine		CO4	
8.	Study of forced convection and free convection heat tra	nsfer over a flat	CO5	
	plate.			
9.	Study of free jet		CO6	
10.	Study of wall jet		CO6

COURSE CODE	XAS502	L	Τ	Р	С
COURSE NAME	AIRCRAFT STRUCTURES – II	3	1	0	4
PREREQUISITES	STRENGTH OF MATERIALS, AIRCRAFT STRUCTURES	L	Т	Р	Η
C:P:A= 3:1:0		3	1	0	4

- **COURSE OBJECTIVES**
 - To understand the behavior of various aircraft structural components under different types of loads.
 - To study the concepts of shear flow.
 - To understand buckling stress of thin-walled sections.

COURS	E OUTCOMES	DOMAIN	LEVEL							
CO1	<i>Express</i> the flexure formula and <i>apply</i> it to symmetrical and unsymmetrical sections of beams.	Cognitive	Understand, Apply							
CO2	<i>Describe</i> stresses in beams and <i>compute</i> shear flow in open sections.	Cognitive	Remember, Understand, Apply							
CO3	<i>Discuss</i> shear flow in closed sections and <i>distinguish</i> single cell and multi-cell structures.	Cognitive	Understand, Analyze							
CO4	<i>Explain</i> bucking of plates; <i>calculate</i> crippling stresses by Needham's and Gerard's methods.	Cognitive	Understand, Apply							
CO5	<i>Explain</i> and <i>analyze</i> the stresses in wing and fuselage structures of an aircraft.	Cognitive	Apply, Analyze							
CO6	<i>Choose</i> the specimen and <i>measure</i> the deflection; <i>explain</i> structural repair works.	Cognitive	Understand, Evaluate							
UNIT I	BENDING OF BEAMS		9+3							
Introduc	tion to semi-monocoque structures - Stresses in beams	of symmetrical	and unsymmetrical							
sections	-Box beams – General formula for bending K-method –	stresses princip	al axes method.							
UNIT II	JNIT II SHEAR FLOW IN OPEN SECTIONS									

Shear stresses in beams – Shear flow in stiffened panels - Shear flow in thin-walled open tubes – Shear centre – Shear flow in open sections with stiffeners.

UNIT III SHEAR FLOW IN CLOSED SECTIONS

10+3

Shear flow in closed sections with stiffeners– Angle of twist - Shear flow in two flange and three flange box beams – Shear centre - Shear flow in thin-walled closed tubes - Bredt-Batho theory –

Torsic	onal shear f	low in	multi cell tubes - Flexura	ll shear flow in multi ce	ll stiffened structure	es.		
UNIT	' IV	BUC	KLING OF PLATES			8+3		
Recta	ngular shee	ts und	er compression - Local b	ouckling stress of thin-	walled sections - Cr	ippling		
stresse	es by Needl	nam's	and Gerard's methods - T	Thin walled column stre	ength-Sheet stiffener	panels		
- Effe	ctive width	, inter	rivet and sheet wrinkling	failures.				
UNIT	JNIT V STRESS ANALYSIS IN WING AND FUSELAGE							
Proce	dure–Shear	and b	ending moment distribut	tion for semi cantileven	r and other types of	wings		
and fu	uselage, thi	in web	bed beam with parallel	and non-parallel flan	<mark>ges</mark> – Shear resista	nt web		
beams	s - Tension	field w	veb beams (Wagner's).

COURSE OBJECTI	COURSE OBJECTIVES									
• To develop a b	pasic knowledge about the solar system									

• To develop a basic knowledge about the solar system.

• To learn the different cases of satellite orbit transfer, different satellite injection errors.

COU	RSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Describe</i> the basic satellite network systems.	Cognitive	Remember
CO2	<i>Estimate</i> the orbital maneuver with help of orbit equation and satellite trajectories.	Cognitive	Understand
CO3	<i>Explain</i> the structural configuration and need of thermal control in satellite.	Cognitive	Apply
CO4	<i>Differentiate</i> the different control methods and systems of satellite.	Cognitive	Analyze
CO5	<i>Judge</i> the power system and bus electronics requirements for the satellite operation.	Cognitive	Evaluate
CO6	<i>Explain</i> the telemetry and telecommand systems.	Cognitive	Apply

UNIT		ISING FLIGHT PERFORMANCE					12				
Equation of motion of a rigid flight vehicle - Different types of drag - Drag polar of vehicles fromlow speed to high speeds - Variation of thrust, power with velocity and altitudes for air breathingengines. Performance of airplane in level flight - Power available and power required curves.Maximum speed in level flight - Conditions for minimum drag and power required.UNIT IIMANOEUVERING FLIGHT PERFORMANCE12											

Range and endurance - Climbing and gliding flight --Turning performance - Bank angle and load factor – limitations on turn - V-n diagram and load factor.

12

12

12

UNIT III STATIC LONGITUDINAL STABILITY

Degree of freedom of rigid bodies in space - Static and dynamic stability - Purpose of controls in airplanes–Static, Longitudinal stability - Stick fixed stability - Basic equilibrium equation - Stability criterion - Influence of CG location - Power effects - Stick fixed neutral point - Stick free stability-Hinge moment coefficient - Stick free neutral points – Symmetric maneuvers - Stick force gradients - Stick force per 'g' - Aerodynamic balancing.

UNIT IV LATERAL AND DIRECTIONAL STABILITY

Dihedral effect - Lateral control - Coupling between rolling and yawing moments - Adverse yaw effects - Aileron reversal - Static directional stability - Weather cocking effect - Rudder requirements - One engine inoperative condition - Rudder lock.

UNIT V DYNAMIC STABILITY

Introduction to dynamic longitudinal stability: - Modes of stability, effect of freeing the stick -Brief description of lateral and directional dynamic stability - Spiral, divergence, Dutch roll, autorotation and spin.

	Equations of CFD.		
CO2	<i>Explain</i> and <i>manipulate</i> the approach of finite	Cognitive	Apply Guided
	Difference method		response
CO3	<i>Illustrate</i> and <i>measure</i> the basic techniques of finite Volume method	Cognitive	Analyze Mechanism

CO4	<i>Formulate</i> and <i>measure</i> the basic techniques of finite Element method.	Cognitive	Create Overt response
CO5	Appraise the applications of CFD in various fields.	Cognitive	Evaluate
CO6	<i>Explain</i> the use of CFDin Aerospace vehicles.	Cognitive	Apply

UNITI INTRODUCTION

Governing equations- Discretization – Pressure velocity coupling – Mesh generation – Multigrid method – Consistency – Stability – Convergence – Accuracy – Efficiency – Boundaryconditions- Turbulencmodeling- Different panel methods.

UNITII FINITEDIFFERENCEMETHOD

Classification of partial differential equation - Explicit and Implicit methods – ADI methods –First order wave equation – Stability of Hyperbolic and elliptic equation -Conservative, Upwind and TransportiveProperty –Upwind Differencing and Artificial Viscosity–Hybrid scheme.

UNITIII FINITEVOLUMEMETHOD

Basic techniques–Generalized approach–Lax-Vendor off Time Stepping–Runge Kutta Time Stepping–Multistage Time Stepping-Equations with first derivatives–Equations with secondDerivatives-Vorticitytran sport formulation–Applications.

UNITIV FINITEELEMENTMETHOD

Galerkin'sweakformulation–weightedresidualwiththeanalyticalsolutionasthetrialfunction – Galerkin's weighted residual form at elemental level – Element formulation for the 2D steadystate heat transfer problem - Approximation for the thermal profile – Determination of element equations– Assembly of elements and solutions of theglobal system equations.

UNITV APPLICATIONS

CFD as a Design tool – CFD as a Research tool – Aerospace applications - Steady and unsteady Analysis - Fluid analysis over the aircrafts& rockets - Fluid analysis inside the Engine – Thermal Analysis – Re-entry Vehicle - Aerodynamic heating - Fluid structure interaction –Satellite's Thermal environment-Introductionto CFD simulation softwarepackages.

COURSE OBJECTIVESTo know about aircraft engine maintenance procedures.

• To know about overhaul procedures and inspection procedures of Aircraft engine.

COUR	SE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Recall</i> about basis of Piston engine and <i>Describe</i> about its Maintenance Procedures.	Cognitive	Remember Understand
CO2	<i>Illustrate</i> various inspections methods of Piston Engine and <i>Explain</i> its overhaul procedures.	Cognitive	Understand Apply
CO3	<i>Explain</i> about checks and maintenance to be carried out for piston engine parts.	Cognitive	Understand Apply

CO4	<i>Recall</i> about basis of Jet engine and inspection procedures.	Cognitive	Remember Understand
CO5	Describe about Maintenance Procedures of Jet engine.	Cognitive	Understand Apply
CO6	<i>Illustrate</i> various inspections methods of Jet Engine and <i>Explain</i> its overhaul procedures.	Cognitive	Understand Apply

UNIT I CLASSIFICATION OF PISTONENGINE COMPONENTS

Typesofpistonengines–Principlesofoperation–Functionofcomponents–Materialsused– Detailsofstartingtheengines–Detailsofcarburetionandinjectionsystemsforsmalland largeengines– Ignitionsystemcomponents–Sparkplugdetails–Engineoperatingconditions at various altitudes – Maintenance and inspection check to be carried out.

UNIT II INSPECTIONS OF PISTON ENGINES

Inspectionandmaintenanceandtroubles hooting–Inspectionofallenginecomponents– Dailyandroutinechecks–Overhaulprocedures–Compressiontestingofcylinders–Special inspectionschedules–Enginefuel,controlandexhaustsystems–Enginemountandsuper charger – Checks and inspection procedures.

UNIT III INSPECTIONS OF PISTON ENGINES

Symptomsoffailure–Faultdiagnostics–Casestudiesofdifferentenginesystems–Tools andequipmentrequirementsforvariouschecksandalignmentduringoverhauling–Toolsfor inspection–Toolsforsafetyandforvisualinspection–Methodsandinstrumentsfornon destructivetestingtechniques–Equipmentforreplacementofpartandtheirrepair.Engine Engine testing procedures and schedule preparation – Online maintenance.

UNIT IV CLASSIFICATION OF JET ENGINE COMPONENTS

12Typesofjetengines–Principlesofoperation–Functionsofcomponents–Materialsused– Detailsofstartingandoperatingprocedures–Gasturbineengineinspection&checks–Useof instrumentsforonline maintenance– Specialinspectionprocedures:ForeignObjectDamage– Blade damage – Maintenanceproceduresofgasturbineengines– Troubleshootingandrectificationprocedures– Component maintenance procedures – Systems maintenance procedures.

UNIT V OVERHAUL PROCEDURES

EngineOverhaulprocedures–Inspectionsandcleaningofcomponents–Repairsschedulesfor overhaul –Balancing of Gas turbine components – Trouble Shooting - Procedures for rectification– Conditionmonitoringoftheengineongroundandataltitude–Enginehealth monitoring and corrective methods.

COURSE CODE XASE21 COURSE NAME ROCKETS AND MISSILES PREREQUISITES NIL C:P:A= 3:0:0 COURSE OBJECTIVES

L	Т	Р	С
3	0	0	3
L	Т	Р	Η
3	0	0	3

- To learn about rocket systems.
 - To understand the aerodynamic behavior of rocket and missiles.
 - To know about the staging and control.

COUR	SE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Explain</i> the design considerations of igniters, injectors and combustion chamber used in rocket system.	Cognitive	Understand
CO2	<i>Identify</i> the elements and components of missiles and rockets.	Cognitive	Apply
CO3	Assess the forces and moments acting on rocket and missiles.	Cognitive	Evaluate

CO4	<i>Compare</i> the one dimensional and two dimensional rocket motions in free space and gravitational field.	Cognitive	Understand
CO5	<i>Inspect</i> the staging and control methods of rockets and missiles.	Cognitive	Analyze
CO6	<i>Examine</i> the performance of materials used rockets and missiles.	Cognitive	Analyze

UNIT I **ROCKETS SYSTEM**

Ignition System in rockets-Types of Igniters-Igniter Design Considerations- Design Consideration of liquid Rocket Combustion Chamber, Injector Propellant Feed Lines, Valves, Propellant Tanks Outlet and Helium Pressurized and Turbine feed Systems – Propellant Slash and Propellant Hammer - Combustion System of Solid Rockets.

UNIT II **AERODYNAMICS OF ROCKETS AND MISSILES**

Airframe Components of Rockets and Missiles- Forces Acting on a Missile - Classification of Missiles – Methods of Describing Aerodynamic Forces and Moments – Lateral Aerodynamic Moment – Lateral Damping Moment and Longitudinal Moment of a Rocket – lift and Drag Forces- Drag Estimation-Body Upwash and Downwash in Missiles - Rocket Dispersion -Numerical Problems.

UNIT III **ROCKETMOTION**

One Dimensional and Two Dimensional rocket Motions in Free Space and Homogeneous Gravitational Fields - Description of Vertical, Inclined and Gravity Turn Trajectories -Determination of range and Altitude Simple Approximations to Burnout Velocity.

UNIT IV STAGING AND CONTROL OF ROCKET VEHICLES

Rocket Vector Control-Methods - Thrust determination- SITVC- Multistage rockets- Vehicle Optimization – Stage Separation Dynamics – Separation Techniques.

UNIT V	MATERIALS FOR ROCKETS AND MISSILES	5
Selection of	Materials – Special Requirements of Materials at Adverse conditions.
