

Criterion 1 – Curricular Aspects

Key Indicator	1.1	Curriculum Design and Development
Metric	1.1.3	Average percentage of courses having focus on employability/ entrepreneurship/ skill development offered by the Civil Engineering

DEPARTMENT OF CIVIL ENGINEERING

SYLLABUS COPY OF THE COURSES HIGHLIGHTING THE FOCUS ON EMPLOYABILITY/ ENTREPRENEURSHIP/ SKILL DEVELOPMENT

1. List of courses for the programmes in order of

S. No.	Programme name
1	Bachelor of Technology(Civil Engineering)(Full Time)
2	Bachelor of Technology((Civil Engineering)(Part Time)
3	Master of Technology(Environmental Engineering)(Full Time)
4	Master of Technology(Environmental Engineering)(Part Time)

2. Syllabus of the courses as per the list.

Legend : Words highlighted with Blue Color Words highlighted with Red Color Words highlighted with Green Color

- Entrepreneurship
- Employability
- Skill Development

Name of the Course	Course Code	Year of introduc tion	Activities/Content with direct bearing on Employability/ Entrepreneurship/ Skill development
B.1	<u>ech. Civil El</u>	ngineering (CADEMIC	
Calculus and Linear Algebra	XMA101	2018-19	Skill Development - Assignment and Seminar
Electrical and Electronic Engineering Systems	XBE102	2018-19	Skill Development - Assignment and Seminar
Physics	XAP103	2018-19	Skill Development - Assignment and Seminar
Engineering Graphics and Design	XEG104	2018-19	Skill Development- Understand the views of the objects, Drawings under various views
Speech Communication	XGS105	2021-22	Skill Development - Assignment and Seminar
Constitution of India	XUM106	2017-18	Skill Development - Assignment and Seminar
Electrical and Electronic Engineering Systems Laboratory	XBE107	2021-22	Skill Development - Assignment and Seminar
Applied Physics for Engineers Laboratory	XAP108	2008-09	Skill Development - Assignment and Seminar
Mathematics-III (Transform &Computational Techniques)	XMA301	2008-09	****
Disaster Preparedness & Planning	XCE302	2019-20	Skill Development - Album and Seminar
Computer Aided Civil Engineering Drawing	XCE303	2019-20	Skill Development-Assignment and Tutorial
Engineering Mechanics	XCE304	2014-15	Skill Development-Assignment and Tutorial
Energy Science and Engineering	XCE305	2014-15	Employability-Field work and Assignments
Surveying – I	XCE306	2014-15	Skill development- Assignment
Introduction to Civil Engineering	XCE307	2019-20	Skill Development - Assignment and Seminar
Effective Technical Communication	XGS308	2016-17	Skill Development-Assignment, Seminar, Technical Report
Inplant Training - I	XCE309	2014-15	Skill Development-Assignment, Seminar, Technical Report
Digital Land surveying and mapping	XCEM09	2019-20	Entrepreneurship-Case study
Mechanics of Materials	XCE501	2019-20	Employability-Tutorials, solving complex problems
Hydraulic Engineering	XCE502	2019-20	Skill Development-Assignment, Seminar, Technical Report

Structural Analysis	XCE503	2019-20	Employability-Tutorials, solving complex problems
Hydrology & Water Resources Engineering	XCE504	2019-20	Skill Development-Assignment, Seminar, Technical Report
Environmental Engineering	XCE505	2019-20	Employability –Tutorials and Case Study
Constitution of India	XUM506	2019-20	Skill Development-Assignment, Seminar, Technical Report
Transportation Engineering	XCE507	2019-20	Skill Development-Assignment, Seminar, Technical Report
Construction Engineering & Management	XCE508	2019-20	Skill Development-Assignment, Seminar, Technical Report
Professional Practice, Law & Ethics	XCE509	2019-20	Skill Development-Assignment, Seminar, Technical Report
In-plant Training - II	XCE510	2019-20	Skill development-Field work
Survey Camp	XCEM08	2008-09	Skill Development-Assignment, Seminar, Technical Report
Elective V	XCEE**	2021-22	Skill Development-Assignment, Seminar, Technical Report
Elective-VI	XCEE**	2021-22	Skill Development-Assignment, Seminar, Technical Report
Elective VII	XCEE**	2021-22	Skill Development-Assignment, Seminar, Technical Report
Project Phase – I	XCE705	2021-22	Employability- Field visit
Inplant Training - III	XCE706	2021-22	Skill development-Field work
Real Estate and Valuation	XCEM01	2019-20	Skill development-Field work
Calculus, Ordinary Differential Equations and Complex Variable	XMA201	2018-19	Skill Development - Assignment and Seminar
Programming for Problem Solving	XCP202	2013-14	Employability- Test, Assignment, Seminar, Poster Presentation
Chemistry	XAC203	2008-09	Skill Development-Assignment, Seminar
Technical Communication	XGS204	2021-22	Skill Development - Assignment and Seminar
Workshop Practices	XWP205	2008-09	Skill Development- Understand the views of the objects, Drawings under various views
Engineering Mechanics	XEM206	2008-09	Skill Development - Assignment and Seminar
Programming for Problem Solving Laboratory	XCP207	2013-14	Employability- Test, Assignment, Seminar, Poster Presentation

COURSE CODE	XMA101	L	Т	Р	С
COURSE NAME	CALCULUS AND LINEAR ALGEBRA	3	1	0	4
PREREQUISITES	NIL	L	Т	Р	Н
C:P:A= 3:0.5:0.5		3	1	0	4

COURSE OBJECTIVES

• Understand the application of calculus and linear algebra in engineering.

COUI	RSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Apply</i> orthogonal transformation to reduce quadratic form to canonical forms.	Cognitive	Remembering Applying
CO2	<i>Apply</i> power series to tests the convergence of the sequences and series. Half range Fourier sine and cosine series.	Cognitive Psychomotor	Applying Remembering Guided Response
CO3	<i>Find</i> the derivative of composite functions and implicit functions. Euler's theorem and Jacobian.	Cognitive Psychomotor	RememberingGui ded Response
CO4	<i>Explain</i> the functions of two variables by Taylor's expansion, by finding maxima and minima with and without constraints using Lagrangian Method. Directional derivatives, Gradient, Curl and Divergence.	CognitiveAffe ctive	Remembering Understanding Receiving
CO5	<i>Apply</i> Differential and Integral calculus to notions of Curvature and to improper integrals.	Cognitive	Applying

UNIT I MATRICES

Linear Transformation - Eigen values and Eigen vectors -Properties of Eigen values and Eigen vectors - Cayley-Hamilton Theorem – Diagonalisation of Matrices – Real Matrices: Symmetric - Skew-Symmetric and Orthogonal Quadratic form – canonical form - Nature of Quadratic form and Transformation of Quadratic form to Canonical form (Orthogonal only).

UNIT II SEQUENCES AND SERIES

Sequences: Definition and examples-Series: Types and convergence- Series of positive terms – Tests of convergence: comparison test, Integral test and D'Alembert's ratio test-Fourier series: Half range sine and cosine series- Parseval's Theorem.

UNIT III MULTIVARIABLE CALCULUS: PARTIAL DIFFERENTIATION 12L+3T

Limits and continuity –Partial differentiation – Total Derivative – Partial differentiation of Composite Functions: Change of Variables – Differentiation of an Implicit Function - Euler's Theorem- Jacobian.

UNIT IV MULTIVARIABLE CALCULUS: MAXIMA AND MINIMA AND 12L+3T

12L+3T

12L+3T

VECTOR CALCULUS

Taylor's theorem for function of Two variables- Maxima, Minima of functions of two variables: with and without constraints - Lagrange's Method of Undetermined Multipliers – Directional Derivatives - Gradient, Divergence and Curl.

UNIT V DIFFERENTIAL AND INTEGRAL CALCULUS

12L+3T

Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

UNIT	- I MECHAN	ICS OF SOLIDS	1			9+3		

UNIT - I MECHANICS OF SOLIDS

Mechanics: Force - Newton's laws of motion - work and energy - impulse and momentum - torque law of conservation of energy and momentum - Friction.

Elasticity: Stress - Strain - Hooke's law - Stress strain diagram - Classification of elastic modulus -Moment, couple and torque - Torsion pendulum - Applications of torsion pendulum - Bending of beams - Experimental determination of Young's modulus: Uniform bending and non-uniform bending.

UNIT -II ELECTROMAGNETIC THEORY

Laws of electrostatics - Electrostatic field and potential of a dipole; Dielectric Polarisation, Dielectric constant, internal field - Clausius Mossotti Equation - Laws of magnetism - Ampere's Faraday's law; Lenz's law - Maxwell's equation - Plane electromagnetic waves; their transverse nature - expression for plane, circularly and elliptically polarized light - quarter and half wave plates - production and detection of plane, circularly and elliptically polarized light.

UNIT –III OPTICS, LASERS AND FIBRE OPTICS

Optics: Dispersion- Optical instrument: Spectrometer - Determination of refractive index and dispersive power of a prism- Interference of light in thin films: air wedge - Diffraction: grating.

12

9+3

9+3

LASER: Introduction - Population inversion -Pumping - Laser action - Nd-YAG laser - CO₂ laser - Applications

Fibre Optics: Principle and propagation of light in optical fibre - Numerical aperture and acceptance angle - Types of optical fibre - Fibre optic communication system (Block diagram).

UNIT –IV SEMICONDUCTOR PHYSICS

Semiconductors: Energy bands in solids - Energy band diagram of good conductors, insulators and semiconductors - Concept of Fermi level - Intrinsic semiconductors - Concept of holes - doping - Extrinsic semiconductors - P type and N type semiconductors - Hall effect.

Diodes and Transistors: P-N junction diode - Forward bias and reverse bias - Rectification action of diode - Working of full wave rectifier using P N junction diodes - PNP and NPN transistors - Three different configurations - Advantages of common emitter configuration - working of NPN transistor as an amplifier in common emitter configuration.

UNIT -V QUANTUM PHYSICS

Introduction to quantum physics, black body radiation, Compton effect, de Broglie hypothesis, wave – particle duality, uncertainty principle, Schrodinger wave equation (Time dependent and Time independent), particle in a box, Extension to three dimension - Degeneracy.

XAP103 Mapping of CO's with PO

COURSE CODE	XEG104	L	Т	Р	С
COURSE NAME	ENGINEERING GRAPHICS AND DESIGN	1	0	2	3
PREREQUISITES	NIL	L	Т	Р	Н
C:P:A= 3:0:0		1	0	2	5

COURSE OBJECTIVES

- To prepare the student to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- To prepare the student to communicate effectively
- To prepare the student to use the techniques, skills, and modern engineering tools necessary for engineering practice

	COURSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Apply</i> the national and international standards, <i>construct</i> and <i>practice</i> various curves	Cognitive Psychomotor Affective	Apply Guided response Respond
CO2	<i>Interpret, construct</i> and <i>practice</i> orthographic projections of points, straight lines and planes.	Cognitive Psychomotor Affective	Understand Mechanism Respond
CO3	<i>Construct Sketch</i> and <i>Practice</i> projection of solids in various positions and true shape of sectioned solids.	Cognitive Psychomotor Affective	Apply overt response Respond
CO4	<i>Interpret, Sketch</i> and <i>Practice</i> the development of lateral surfaces of simple and truncated solids, intersection of solids.	Cognitive Psychomotor Affective	Understand Overt response Respond
CO5	<i>Construct sketch</i> and <i>practice</i> isometric and perspective views of simple and truncated solids.	Cognitive Psychomotor Affective	Apply Overt response Respond
UNIT	I INTRODUCTION, FREE HAND SKETCHIN	NG OF ENGG	6L+12P

OBJECTS AND CONSTRUCTION OF PLANE CURVE

Importance of graphics in engineering applications – use of drafting instruments – BIS specifications and conventions as per SP 46-2003.

Pictorial representation of engineering objects – representation of threedimensional objects in two dimensional media – need for multiple views – developing visualization skills through free hand sketching of three dimensional objects.

Polygons & curves used in engineering practice – methods of construction – construction of ellipse,

parabola and hyperbola by eccentricity method – cycloidal and involute curves – construction – drawing of tangents to the above curves. Practice on basic tools of CAD.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES

6L+12P

General principles of orthographic projection – first angle projection – layout of views – projections of points, straight lines located in the first quadrant – determination of true lengths of lines and their inclinations to the planes of projection – traces – projection of polygonal surfaces and circular lamina inclined to both the planes of projection-CAD practice on points and lines

UNIT III PROJECTION OF SOLIDS AND SECTIONS OF SOLIDS 6L+12P

Projection of simple solids like prism, pyramid, cylinder and cone when the axis is inclined to one plane of projection – change of position & auxiliary projection methods – sectioning of above solids in simple vertical positions by cutting plane inclined to one reference plane and perpendicular to the other and above solids in inclined position with cutting planes parallel to one reference plane – true shapes of sections-CAD practice on solid models.

UNIT IV DEVELOPMENT OF SURFACES AND INTERSECTION OF 6L+12P SOLIDS

Need for development of surfaces – development of lateral surfaces of simple and truncated solids – prisms, pyramids, cylinders and cones – development of lateral surfaces of the above solids with square and circular cutouts perpendicular to their axes – intersection of solids and curves of intersection –prism with cylinder, cylinder & cylinder, cone & cylinder with normal intersection of axes and with no offset-CAD practice on intersection of solids.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS

6L+12P

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones – principles of perspective projections – projection of prisms, pyramids and cylinders by visual ray and vanishing point methods-CAD practice on isometric view.

UNIT	I					08

UNIT I

Constitutional History- The Constitutional Rights- Preamble- Fundamental Rights-Fundamental Duties- Directive principles of State Policy.

UNIT II

The Union Executive- The President of India (powers and functions)- Vice-President of India-The Council of Ministers-Prime Minister- Powers and Functions.

UNIT III

Union Legislature- Structure and Functions of Lok Sabha- Structure and Functions of Rajya Sabha- Legislative Procedure in India- Important Committes of Lok Sabha- Speaker of the Lok Sabha.

UNIT IV

The Union Judiciary- Powers of the Supreme Court- Original Jurisdiction- Appelete jurisdictions- Advisory Jurisdiction- Judicial review.

UNIT V

Centre State relations- Political Parties- Role of governor, powers and functions of Chief Minister-Legislative Assembly- State Judiciary- Powers and Functions of the High Courts.

OBJECTIVES

The course helpsto

- a. Learn the basic concepts of electrical and electronics components.
- b. Understand the basic wiring methods and connection.
- c. Study the characteristics of diodes, Zener diodes, NPN transistors.
- d. Verify the working of simple logic gates, adders and subtractors.

LIST OF EXPERIMENTS

Ex. No	Experiments	COs
1.	Study of Electrical Symbols, Tools and Safety Precautions, Power Supplies.	-
2.	Study of Active and Passive elements – Resistors, Inductors and Capacitors, Bread Board.	-
3.	Testing of DC Voltage and Current in series and parallel resistors which are connected in breadboard by using Voltmeter, Ammeter and Multimeter.	-
4.	Fluorescent lamp connection with choke.	-
5.	Staircase Wiring	-
6.	Forward and Reverse bias characteristics of PN junction diode.	-
7.	Forward and Reverse bias characteristics of zener diode.	-

COURSE OBJECTIVES

• Understand the application of Calculus, Ordinary Differential Equations and Complex Variable in engineering.

COUR	RSE OUTCOMES	DOMAIN	LEVEL
CO1	Find double and triple integrals and to find line, surface and volume of an integral by Applying Greens, Gauss divergence and Stokes theorem.	Cognitive	Remember, Apply
CO2	Solve first order differential equations of different types which are solvable for p, y, x and Clairaut's type.	Cognitive	Apply
CO3	Solve Second order ordinary differential equations with variable coefficients using various methods.	Cognitive	Apply
CO4	Use CR equations to verify analytic functions and to find harmonic functions and harmonic conjugate.Conformal mapping of translation and rotation.Mobius transformation.	Cognitive Psychomotor	Remember, Apply Guided Response
CO5	Apply Cauchy residue theorem to evaluate contour integrals involving sine and cosine function and to state Cauchy integral formula, Liouvilles theorem. Taylor's series, zeros of analytic functions, singularities, Laurent's series.	Cognitive Affective	Apply Receiving
UNIT	I MULTIVARIABLE CALCULUS (INTEGRA	TION)	9L+3T

Multiple Integration: Double integrals (Cartesian) - change of order of integration in double integrals - Change of variables (Cartesian to polar) - Triple integrals (Cartesian), Scalar line integrals - vector line integrals - scalar surface integrals - vector surface integrals - Theorems of Green, Gauss and Stokes.

UNIT II FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 9L+3T

Exact - linear and Bernoulli's equations - Euler's equations - Equations not of first degree: equations solvable for p - equations solvable for y- equations solvable for x and Clairaut's type.

UNIT III ORDINARY DIFFERENTIAL EQUATIONS OF HIGHER ORDERS 9L+3T

Second order linear differential equations with variable coefficients- method of variation of parameters - Cauchy-Euler equation- Power series solutions- Legendre polynomials- Bessel functions of the first kind and their properties.

UNIT IV COMPLEX VARIABLE – DIFFERENTIATION

Differentiation-Cauchy-Riemann equations- analytic functions-harmonic functions-finding harmonic conjugate- elementary analytic functions (exponential, trigonometric, logarithm) and their properties- Conformal mappings- Mobius transformations and their properties.

9L+3T

9L+3T

UNIT V COMPLEX VARIABLE – INTEGRATION

Contour integrals - Cauchy-Goursat theorem (without proof) - Cauchy Integral formula (without proof)-Liouville's theorem (without proof)- Taylor's series- zeros of analytic functionssingularities- Laurent's series – Residues- Cauchy Residue theorem (without proof)- Evaluation of definite integral involving sine and cosine- Evaluation of certain improper integrals using the Bromwich contour.

COURSE OBJECTIVES

- To learn programming language basics and syntax
- To ignite logical thinking
- To understand structured programming approach
- To deal with user defined data types
- To know about data storage in secondary memory

COU	RSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Define</i> programming fundamentals and <i>Solve</i> simple programs using I/O statements	Cognitive	Remember Understand Apply
CO2	<i>Define</i> syntax and <i>write simple programs</i> using control structures and arrays	Cognitive	Remember Understand Apply
CO3	<i>Explain</i> and <i>write simple programs</i> using functions and pointers	Cognitive	Remember Understand Apply
CO4	<i>Explain</i> and <i>write simple programs</i> using structures and unions	Cognitive	Remember Understand Apply
CO5	<i>Explain</i> and <i>write simple programs</i> using files and <i>Build</i> simple projects	Cognitive	Remember Understand Apply

UNIT I PROGRAMMING FUNDAMENTALS AND I/O STATEMENTS

9

Introduction to components of a computer system, Program – Flowchart – Pseudo code – Software – Introduction to C language – Character set – Tokens: Identifiers, Keywords, Constants, and Operators – sample program structure -Header files – Data Types- Variables - Output statements – Input statements.

UNIT II CONTROL STRUCTURES AND ARRAYS

Control Structures – Conditional Control statements: Branching, Looping - Unconditional control structures: switch, break, continue, goto statements – Arrays: One Dimensional Array – Declaration – Initialization – Accessing Array Elements – Searching – Sorting – Two Dimensional arrays - Declaration – Initialization – Matrix Operations – Multi Dimensional Arrays - Declaration – Initialization – extern – static. Strings: Basic operations on strings.

UNIT III FUNCTIONS AND POINTERS

Functions: Built in functions – User Defined Functions - Parameter passing methods - Passing arrays to functions – Recursion - Programs using arrays and functions. Pointers - Pointer declaration - Address operator - Pointer expressions & pointer arithmetic - Pointers and function - Call by value - Call by Reference - Pointer to arrays - Use of Pointers in self-referential structures-Notion of linked list.

UNIT IV STRUCTURES AND UNIONS

Structures and Unions - Giving values to members - Initializing structure - Functions and structures - Passing structure to elements to functions - Passing entire function to functions - Arrays of structure - Structure within a structure and Union.

UNIT V FILES

File management in C - File operation functions in C - Defining and opening a file - Closing a file - The getw and putw functions - The fprintf & fscanf functions - fseek function – Files and Structures.

COURSE NAME	APPLIED CHEMISTRY FOR ENGINEERS	3	1	0	4
PREREQUISITES	NIL	L	Т	Р	Н
C:P:A= 2.5:1:0.5		3	1	0	4

COURSE OBJECTIVES

• Understand the application of chemistry in engineering.

COU	RSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Identify</i> the periodic properties such as ionization energy, electron affinity, oxidation states and electro negativity. <i>Describe</i> the various water quality parameters like hardness and alkalinity.	Cognitive Psychomotor	Remembering Perception
CO2	<i>Explain and Measure</i> microscopic chemistry in terms of atomic, molecular orbitals and intermolecular forces.	Cognitive Psychomotor	Understanding Set
СО3	<i>Interpret</i> bulk properties and processes using thermodynamic and kinetic considerations.	Cognitive Psychomotor Affective	Applying Mechanism Receive
CO4	<i>Describe, Illustrate and Discuss</i> the chemical reactions that are used in the synthesis of molecules.	Cognitive Psychomotor Affective	Remembering Analyzing Perception Responding
CO5	<i>Apply, Measure</i> and <i>Distinguish</i> the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques	Cognitive Psychomotor	Remembering, Applying Mechanism

UNIT I PERIODIC PROPERTIES AND WATER CHEMISTRY

8L+3T

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries. **Water Chemistry**-Water quality parameters-Definition and explanation of hardness, determination of hardness by EDTA method-Introduction to alkalinity.

UNIT II USE OF FREE ENERGY IN CHEMICAL EQUILIBRIA

12L+3T

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria. Corrosion-Types, factors affecting corrosion rate and Control methods. Use of free energy considerations in metallurgy through Ellingham diagrams. Advantages of electroless plating, electroless plating of nickel and copper on Printed Circuit Board (PCB).

UNIT III ATOMIC AND MOLECULAR STRUCTURE

10L+3T

8L+3T

Schrodinger equation. Particle in a box solution and their applications for conjugated molecules and nanoparticles.. Molecular orbitals of diatomic molecules and plots of the multicenter orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic molecules. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.

Intermolecular forces and potential energy surfaces

Ionic, dipolar and Vander waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H₃, H₂F and HCN and trajectories on these surfaces.

UNIT IV SPECTROSCOPIC TECHNIQUES AND APPLICATIONS 7L+3T

Principles of spectroscopy and selection rules. Electronic spectroscopy-chromophore, auxochromes, types of electronic transition and application. Fluorescence and its applications in medicine. Vibrational spectroscopy-types of vibrations, Instrumentation and applications. Rotational spectroscopy of diatomic molecules. Nuclear magnetic resonance spectroscopy-concept of chemical shift and applications-magnetic resonance imaging. Diffraction and scattering.

UNIT V STEREOCHEMISTRY AND ORGANIC REACTIONS

Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds

Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization reactions and ring opening reactions. Synthesis of a commonly used drug molecule-Aspirin and paracetamol.

COURSE OBJECTIVES

Upon successful completion of the course, student will have:

- Ability to apply mathematics, science, and engineering.
- Ability to design and conduct experiments, as well as to analyze and interpretdata.
- Ability to identify, formulate, and solve engineeringproblems.
- Ability to apply modern engineering tools, techniques and resources to solve complex mechanical engineering activities with an understanding of thelimitations.
- Ability to comprehend the thermodynamics and their corresponding processes that influence the behavior and response of structural components.
- Ability to apply principles of engineering, basic science, and mathematics (including multivariate calculus and differential equations) and thermodynamics to model, analyze, design, and realize physical systems, components, orprocesses.

COU	RSE OUTCOMES	DOMAIN	LEVEL
CO1	<i>Explain</i> the principles forces, laws and theirapplications.	Cognitive	Understanding, Apply
CO2	<i>Classification</i> of friction, and <i>apply</i> the forces in Trusses and beams.	Cognitive	Understanding, Apply
CO3	<i>Explain</i> and <i>Apply</i> moment of Inertia and Virtual work	Cognitive	Understanding, Apply
CO4	Outline and Examine Dynamics	Cognitive	Understanding,

Apply

Remember,

Understanding

Cognitive

CO5 *Explain* free and forced vibration

UNIT I

Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant- Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static indeterminacy.

INTRODUCTION TO ENGINEERING MECHANICS

UNIT II FRICTION AND BASIC STRUCTURAL ANALYSIS 9L+3T

Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, wedge friction, screw jack & differential screw jack; Equilibrium in three dimensions; Method of Sections; Method of Joints; How to determine if a member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames & Machines.

UNIT III CENTROID, CENTRE OF GRAVITY AND VIRTUAL WORK 9L+3T AND ENERGY METHOD

Centroid of simple figures from first principle, centroid of composite sections; Centre of Gravity and its implications; Area moment of inertia- Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.

Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium.

UNIT IV REVIEW OF PARTICLE DYNAMICS AND INTRODUCTION TO 9L+3T KINETICS OF RIGID BODIES

Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton's 2nd law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse-momentum (linear, angular); Impact (Direct and oblique). Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid bodyrotation.

9L+3T

 Land disposal - sewage farming practice - dilution - discharge into rivers, estuaries and ocean - river pollution - oxygen sag - self-purification - eutrophication. - sludge treatment - properties and characteristics of sludge - sludge digestion and drying beds – Recycle and reuse.
 30

 PRACTICAL
 30

 1. Determination of pH, turbidity and conductivity.
 2. Determination of the available chlorine in bleaching powder and estimation of the residual chlorine.

- 3. Determination of optimum dosage of coagulant
- 4. Determination of Iron and Fluoride.
- 5. Determination of Phosphorous
- 6. Determination of Potassium
- 7. Determination of Total Solids and Suspended solids.
- 8. Determination of Biochemical Oxygen Demand.
- 9. Determination of Chemical Oxygen Demand.
- 10. Determination of Ammonia Nitrogen.
- 11. Demonstration of Bacteriological analysis of water.

COURSE	CONTENT	Affective		Resp	onse
UNIT I	SOURCES, CLASSIFICATION AND REGULA	TORY FR	AME	WOR	K 9
	Types and Sources of solid wastes - Need for solid of integrated waste management and roles of stat Indian legislations on management and handling hazardous wastes, biomedical wastes, E-wastes, Lo fly ash - Financing waste management.	keholders - g of munic	Salie ipal s	nt feat olid v	tures of vastes ,
UNIT II	WASTE CHARACTERIZATION AND SOURC	CE REDUC	TION	[	9
	Waste generation rates and variation - Compose biological properties of solid wastes –Hazardous waste sampling and characterization plan - Source exchange - Extended producer responsibility - Recy	characterist	ics - ' of w	TCLP	tests -
UNIT III	STORAGE, COLLECTION AND TRANSPORT	Γ OF WAS	ГES		9
	Handling and segregation of wastes at source – stor solid wastes – Analysis of Collection systems - No Transfer stations Optimizing waste allocation –com handling and Transport of hazardous wastes.	eed for trans	sfer a	nd trar	nsport –
UNIT IV	WASTE PROCESSING TECHNOLOGIES				9
	Course Objectives: of waste processing – mater technologies – biological and chemical conversio controls of Composting - thermal conversion techn incineration- solidification and stabilization of ha waste treatment.	n technolog nologies and	gies – I energ	metho gy rec	ods and overy – medical
UNIT V	WASTE DISPOSAL				9
	Waste disposal options – Disposal in landfills - La methods – site selection - design and operation landfills and landfill bioreactors – leachate and lan closure and environmental monitoring – Rehabilit remediation	n of sanita dfill gas ma	ry lan nagen	dfills, nent –	secure landfill

TUT	ORIALS				15
1.	Develop a Strategic Plan for Civil Engineering works for next investments and identify one typical on-going mega project	ten y	vears t	based	on past
2.	Identify ten best civil engineering projects with high aesthetic factor for each; List down the possible systems required for a typ			-	ossible
3.	List top five tunnel projects in India and their features; collect investigation report of any one Metro Rail (underground) project		study	geote	chnical
4.	Visit a construction site and make a site visit report. Colle prepared by a Total Station and LIDAR and compare; Study t and Google Earth Map and study how each can facilitate the othe	ypical		+	
5.	Collect the history of a major rehabilitation project and list the in	teresti	ng fea	tures

At the end	of th	e co	urse	the stude	ent will be	able to									
• To provide basics of digital surveying and mapping of earth surface using total station, GPS and mapping software.															

• The course starts with introduction to land surveying followed by fundamentals of total station and its working & measurements for land surveying.

• Fundamentals, working & measurements using GPS for land surveying will be discussed.

- Followed by mapping fundamentals, digital surveying procedure, working, data reduction etc.
- Finally, the course will deals with working and demonstration of a digital land surveying and mapping of an area.

	e Outcome: After the completion of the course, students able to	Domain C or P or A	Level
CO1	Understand the importance of digital surveying and mapping of earth surface.	Cognitive	Understanding
CO2	Understand the importance of total station and its working & measurements for land surveying.	Cognitive	Understanding
CO3	Understand the importance of Fundamentals, working & measurements using GPS for land surveying.	Cognitive	Understanding
CO4	Learn some of the best management practices in, digital surveying procedure, working, data reduction etc.	Psychomotor Affective	Guided ResponseRespo nding
CO5	Understand the concepts of preparation of master demonstration of a digital land surveying and mapping of an area.	Psychomotor Affective	Guided ResponseRespo nding

Analyse

CO2	Analyse indeterminate structures for shear force and bending moment.	Cognitive& Affective	Analyzing & Respond
CO3	Discuss the failure criteria of the column and cylinder based on end condition	Cognitive & Affective	Understanding & Respond
CO4	Compute the deflection of beams by energy principles	Cognitive & Affective	Application & Receive
CO5	Analyse the degrees of freedom for static and kinematic frames.	Cognitive	Analyse

#### **COURSE CONTENT**

#### UNIT I DEFLECTIONS OF BEAMS

Introduction, Equation of Elastic Curve, Methods for Determining Deflections (Double Integration, Macaulay's Method, Moment-Area Method). Strain energy and dummy unit load approaches to deflection of Simple and Curved members.

#### UNIT II INDETERMINATE BEAMS

Propped cantilever and fixed beams-fixed end moments and reactions– Theorem of Three Moments – Shear force and Bending moment diagrams for continuous beams.

## UNIT III COLUMNS AND THICK CYLINDERS

Introduction – Short and Long Columns, Euler's Theory, Rankine-Gordon Formula, Eccentrically Loaded Columns - Thick cylinders – compound cylinders.

## UNIT IV ENERGY PRINCIPLES

Castigliano's theorems – principle of virtual work – Maxwell's reciprocal theorems.application of energy theorems for computing deflections in beams and trusses.

## UNIT V INDETERMINATE BEAMS AND FRAMES

Degree of static and kinematic indeterminacies for beams and plane frames - analysis of indeterminate pin-jointed frames - rigid frames.

**Course Objectives** 

- To understand the soil properties, composition and structure
- To Familiarize the students an understanding of permeability and seepage of soils
- To learn the stress-strain relationship
- To know about the strength of soil and its analysis

<i>Identify</i> and <i>analyze</i> various types of soils for engineering utilization.	C or P or A Cognitive &	
	Cognitive &	
	-	Remembering &
	Psychomotor	Observation
Determine the necessary index and	Cognitive	Analyzing
engineering properties of soils.	Affective	Respond to
	Psychomotor	Phenomena
		Observation
<i>Predicts</i> the stress distribution pattern of soil	Cognitive,	Application
	Affective &	Respond to
	Psychomotor	Phenomena
		Manipulation
<i>Illustrate</i> the failure modes of Soil	Cognitive &	Understanding
	Psychomotor	Manipulation
<i>Investigate</i> the soil using appropriate methods	Cognitive &	Remembering
and equipments.	Psychomotor	Observation
RSE CONTENT		
	engineering properties of soils.  Predicts the stress distribution pattern of soil  Illustrate the failure modes of Soil  Investigate the soil using appropriate methods and equipments.  RSE CONTENT	engineering properties of soils.Affective PsychomotorPredicts the stress distribution pattern of soilCognitive, Affective & PsychomotorIllustrate the failure modes of SoilCognitive & PsychomotorInvestigate the soil using appropriate methods and equipments.Cognitive & PsychomotorRSE CONTENTCognitive 

	Origin of Soils and Rocks; Rock cycle; Soil minarology; Index properties including consistency limits and grain size distribution – Identification and classification of soil – Textural HRB and BIS specification
	Methods of exploration, geophysical and conventional methods; Sounding drilling and boring technique; Field tests – penetration tests
UNIT II	SOIL - WATER STATICS7
	Concept effective and neutral stresses – Darcy's law, Permeability – Field and Laboratory permeability tests –Seepage flow, seepage pressure, exit gradient – Flownet – significance of Laplace equation – quick sand condition, Liquefaction
UNIT III	COMPRESSIBILITY AND CONSOLIDATION OF SOIL12
	Compaction – Factors affecting compaction – proctor test – Field compaction – Field compaction controls, CBR value and CBR test
	Consolidation of soils – Terzaghi's one dimensional consolidation theory – pressure void ratio relationship – prediction of pre consolidation pressure – Total settlement and time rate settlement – secondary compression – coefficient of consolidation – Curve fitting methods, consolidation models.
UNIT IV	STRESSES IN SOIL FROM SURFACE LOADS8
	Vertical stress distribution in soil - Boussinesq's and Westerguard's equations – Newmark's influence chart – Principle, Construction and use - Equivalent point load and other approximate procedures, stress isobars & pressure bulbs
UNIT V	SHEAR STRENGTH OF SOIL9
	Shear Strength; Mohr – Coulomb failure criterion and models – laboratory and field tests – shear properties of cohesion less and cohesive soils - Shear Strength. Parameters for under consolidated, normally consolidated and over consolidated clays; Soil sensors applied in field, Modern advancements; Trenchless Technology

Semester	:	Ι				
Subject	:	TRANSPORT OF WATER AND WASTEWATH	ER			
Name						
Subject Code	:	YEN 104				
Designed by	:	Department of Civil Engineering				
Prerequisite	:	Environmental Engineering – I & II				
LT	Р	C	L	Т	Р	Η

#### **COURSE CONTENT**

#### UNIT I TRANSPORT OF WATER

1

Water Storage and Transmission, Storage- requirements, impounding reservoirsintakes, pressure conduits, hydraulics - pumps and pumping units, capacity selection of water pumps -economic design of pumps and economic design of gravity and pumping mains- Analysis of physical and Chemical characteristics of Water

#### UNIT II MATERIALS FOR PIPES

Specification for pipes, merits and demerits, pipe appurtenances, types of loads and stresses, water hammer, causes and prevention, control devices, laying, jointing and Testing of pipes.

#### UNIT III DISTRIBUTION SYSTEM

Principles of design, analysis of distribution networks, Hardy Cross, equivalent pipe and Newton Raphson methods, computer applications in distributions network analysis, optimal design of networks, maintenance of distribution systems, methods of control and prevention of corrosion, storage, distribution and balancing reservoirs – EPANET- LOOP

#### UNIT IV SANITARY SEWERAGE

Storm Drainage: Basic philosophy in storm drainage - drainage layouts - storm runoff estimation - Rainfall data analysis - hydraulics of flow in storm water drains - storm water drain materials and sections - design of storm drains - storm water inlets - Sanitation technology selection - sanitary sewage flow estimation - sewer materials - hydraulics of flow in sanitary sewers - partial flows - sewer design - sewer layouts. - Analysis of physical and

#### 10

9

20

2

3

5

#### 12

Chemical characteristics of Waste water.

#### UNIT V OPERATION & MAINTENANCE

Maintenance requirements of sanitary sewerage - storm drainage systems -
manpower requirement - Equipment requirement - preventive maintenance -
monitoring safety requirements- corrosion in sewers - prevention and control -
Specific problems related to waste water pumping - pumping - pump selection -
wastewater pumping networks

#### **COURSE CONTENT**

UNIT I	INTRODUCTION TO AIR POLLUTANTS9
	Air resource management system - Air quality management - Scales of air pollution problem - Sources and classification of pollutants and their effect on human health vegetation and property - Global implications of air pollution - Meteorology Fundamentals - Atmospheric stability – Micrometeorology - Atmospheric turbulence - mechanical and thermal turbulence - Wind profiles - Atmospheric Diffusion - Atmospheric diffusion theories - Steady-state atmospheric diffusion equation – Plume rise - Diffusion models - Ambient air quality and emission standards – Air pollution indices – Air Quality Sampling and Monitoring.
UNIT II	CONTROL OF PARTICULATE CONTAMINANTS9
	Settling chambers - Filters, gravitational, Centrifugal – multiple type cyclones, prediction of collection efficiency, pressure drop, wet collectors, Electrostatic Precipitation theory – ESP design – Operational Considerations – Process Control and Monitoring – Case Studies.
UNIT III	CONTROL OF GASEOUS CONTAMINANTS9
	Absorption – principles - description of equipment-packed and plate columns - design and performance equations – Adsorption - principal adsorbents - Equipment descriptions – Design and performance equations – Condensation - design and performance equation – Incineration - Equipment description - design and performance equations - Biological Air Pollution Control Technologies – Bio- Scrubbers, Biofilters – Operational Considerations – Process Control and

	Monitoring – Case Studies.	
UNIT IV	EMERGING TRENDS	9
	Process Modification – Automobile Air Pollution and its control – Modification - Mechanical Particulate Collectors – Entrainment Separati Internal Combustion Engines – Membrane Process – Ultraviolet Photolysis – Efficiency Particulate Air Filters – Technical & Economic Feasibility of sel emerging technologies for Air pollution control	on – High
UNIT V	INDOOR AIR QUALITY	9
	Sources and Causes of Indoor Air Quality Problems- Risk due to Indoo pollutants- sources of indoor Air pollutants- Indoor Air Quality Regulations- Indoor Air Quality Models- Indoor Air Quality Control- Case Studies

The student individually works on a specific topic approved by faculty member who is familiar in this area of interest. The student can select any topic which is relevant to his/her specialization of the programme. The topic may be experimental or analytical or case studies. At the end of the semester, a detailed report on the work done should be submitted which contains clear definition of the identified problem, detailed literature review related to the area of work and methodology for carrying out the work. The students will be evaluated through a viva-voce examination by a panel of examiners including one external examiner.

# **COURSE CONTENT**

# UNIT I INTRODUCTION TO AIR POLLUTANTS

Air resource management system - Air quality management - Scales of air pollution problem - Sources and classification of pollutants and their effect on human health vegetation and property - Global implications of air pollution - Meteorology Fundamentals - Atmospheric stability – Micrometeorology - Atmospheric turbulence - mechanical and thermal turbulence - Wind profiles - Atmospheric Diffusion - Atmospheric diffusion theories - Steady-state atmospheric diffusion equation – Plume rise - Diffusion models - Ambient air quality and emission standards – Air pollution indices – Air Quality Sampling and Monitoring.

# UNIT II CONTROL OF PARTICULATE CONTAMINANTS

Settling chambers - Filters, gravitational, Centrifugal – multiple type cyclones, prediction of collection efficiency, pressure drop, wet collectors, Electrostatic Precipitation theory – ESP design – Operational Considerations – Process Control and Monitoring – Case Studies.

# UNIT III CONTROL OF GASEOUS CONTAMINANTS

Absorption – principles - description of equipment-packed and plate columns - design and performance equations – Adsorption - principal adsorbents - Equipment descriptions – Design and performance equations – Condensation - design and performance equation – Incineration - Equipment description - design and performance equations - Biological Air Pollution Control Technologies – Bio-Scrubbers, Biofilters – Operational Considerations – Process Control and Monitoring – Case Studies.

# UNIT IV EMERGING TRENDS

Process Modification – Automobile Air Pollution and its control – Fuel Modification - Mechanical Particulate Collectors – Entrainment Separation – Internal Combustion Engines – Membrane Process – Ultraviolet Photolysis – High Efficiency Particulate Air Filters – Technical & Economic Feasibility of selected emerging technologies for Air pollution control

# UNIT V INDOOR AIR QUALITY

Sources and Causes of Indoor Air Quality Problems- Risk due to Indoor Air pollutants- sources of indoor Air pollutants- Indoor Air Quality Regulations- Indoor Air Quality Models- Indoor Air Quality Control- Case Studies

#### JUKSE CUNTENI

The student individually works on a specific topic approved by faculty member who is familiar in this area of interest. The student can select any topic which is relevant to his/her specialization of the programme. The topic may be experimental or analytical or case studies. At the end of the semester, a detailed report on the work done should be submitted which contains clear definition of the identified problem, detailed literature review related to the area of work and methodology for carrying out the work. The students will be evaluated through a viva-voce examination by a panel of examiners including one external examiner.

# **COURSE CONTENT**

The student should continue the phase I work on the selected topic as per the formulated
methodology. At the end of the semester, after completing the work to the satisfaction of the
supervisor and review committee, a detailed report should be prepared and submitted to the
head of the department. The students will be evaluated based on the report and the viva-voce
examination by a panel of examiners including one external.

Semeste r	Course Code	Course Name	L	Τ	Р	С		
I	YEN101	Chemistry and Microbiology for Environmental Engineers	3	0	0	3		
		COURSE CONTENT						
UNIT I	FUNDAMEN	TALS ON ANALYTICAL CHEMISTR	Y			12		
	Colloids – Red Limitations – measurements, Instrumentation Adsorption Sp -Application in samples. Chro	reduction reactions, balancing equation b ox potentials – partition co-efficient – Bee Electrode potential – Applications of p glass electrodes, ion selection is- Atomic spectroscopy – Flame phot ectrophotometry – principle- UV– visible in determination of mercury, lead and matography – Gas chromatography – sir in measuring SO ₂ , NO ₂ & H ₂ S by spectrophot	r – Lan potentic ve o tometr e spect cadmin nple ins	nbert's ometry electroo y – A rophoto um in strume	Law – – pH des – Atomic ometer water			
UNIT II	DEGRADATI	ON OF CHEMICALS				6		
	-	transformation of chemicals – DO, BOE adation of foodstuffs, detergents, pesticide						
UNIT III	SOIL CHEMI	STRY				9		
	Soil properties,	Soil properties, clay minerals - acid-base and ion-exchange reactions in soil -						

	salt affected soil and its remediation						
UNIT IV	MICROORGANISMS AND NUTRITIONAL REQ	UIRE	MENT	S	9		
Basic principles of microbiology- structure and function of microbial cell- pure and mixed cultures-metabolism-Aerobic and Anaerobic pathways- Microbial growth and growth kinetics-Classification and morphological aspects of Bacteria, Fungi, Protozoa and algae. Microbial Nutrition –Growth of micro-organism in different media, growth curve, methods of enumeration of micro-organisms, sterilization and disinfection.							
UNIT V	MICROBIOLOGY IN WASTE WATER						
Biological methods to treat waste water- Microbiology in air pollution control (biofilter and bio scrubber), biodegradation of toxic pollutant. Practical: culture, identify and explain microorganisms in environmental cultures
