# **Report on Research Methodology**

Three days National workshop on “The cornerstones of the research process: Unraveling the science of scientific writing and communication” organized by office of Dean Research and IQAC. Professor Pitchai Balakumar has taught on the following topics to the 46 persons who have attended. Workshop conducted from 28<sup>th</sup> to 30<sup>th</sup> April 2022.

The Key topics Discussed in this workshop are as follows:

1. Cornerstones of the research process.
2. Constructing a successful literature search and review using different databases and search engines.
3. PubMed/Medline and Scopus search.
4. Impact Factor, CiteScore, h-index (Author & Institution),  $h_m$ -index, h5-index, Citations, Self-citations, Field-Weighted Citation Impact, and Citation benchmarking.
5. Practical session on basic statistical analysis (Student's t-test, ANOVA, Post-hoc Tukey's multiple comparison test, Dunnett's multiple comparison test, and Bonferroni multiple comparison test, etc.).
6. Art and science of scientific writing: Effectively writing the components of a Research Paper/Thesis, including Title, Abstract, Introduction, Results, Discussion and Conclusion sections.
7. Harvard and Vancouver Referencing styles (AMA, APA, MLA, NLM styles).
8. Web of Science, ISI, SCI, SCIE, SSCI, ESCI, Journal Citation Reports-JCR, Clarivate analytics Journal Impact Factor (current), and Selection of a scientific Journal.
9. Working with journals: Cover letter, Conflict of interest, peer reviewing, responding to reviewers, Publication process, *etc.*
10. Ethics in scientific publications.

ABOUT THE WORKSHOP

This is an interactive workshop on 'Basic Statistical Analysis Employed in Data Analysis.' Statistical analysis is considered a key part in scientific research. Employing appropriate and accurate statistical tests in data analysis is of great importance and prerequisite in research. Based on these criteria, the present workshop is committed to educate the students, teachers and researchers with regard to the basic concepts of statistical analysis and selection of appropriate statistical tests, including post-hoc tests employed in data analysis. Moreover, this workshop is planned to have practice and demonstration sessions for a better understanding of the concepts by the participants on basic statistical analysis.

PROPOSED LEARNING OBJECTIVES

- After having efficaciously attended all the sessions, the workshop participants are expected to:
- Explain two major categories in the field of statistics: descriptive and inferential statistics.
- Discuss the elements of measures of central tendency, and dispersion and skewness.
- Outline different data types/scales of measurements (categorical and numerical): nominal, ordinal, interval and ratio data.
- Be familiar with the types of variables: dependent and independent variables.
- Distinguish the experimental from non-experimental research.
- Learn the sample size calculation.
- Describe normal distribution, non-normal distribution and confidence interval/limit.
- Explicate the hypothesis testing, type I and type II errors, and statistical tests of significance.
- Summarize the overall conceptual framework for statistical analyses of data.
- Perform Paired/Unpaired t test, Wilcoxon signed rank test, Mann-Whitney U test, One-way ANOVA, Repeated Measures ANOVA, Kruskal-Wallis test, and Post-hoc tests (Tukey's multiple comparison test, Dunnett's Multiple Comparison test, Bonferroni test, and Sidak multiple comparison tests), among others.
